

## UNISA AUSTRALIAN HPV SUPER SERIES

### Transponder Information

---

Classic Round Transponders have been superseded by the Pro Chip Flex transponder which is sold on a subscription basis. The life expectancy of the old-style transponder is around 5 – 6 years dependant on use.

We recommend teams upgrade their old transponders to the new model. To assist with this process MyLaps are offering a trade in deal for teams with the classic round transponder. You can return the old transponder and in exchange receive a new Pro Chip Flex transponder with a 2 year subscription (value \$76) for the price of 1 year (value \$51).

The new transponders are covered by a lifetime warranty. Provided you have a current subscription, you can return the damaged/flat transponder to MyLaps for replacement.

For further information go to the MyLaps website at <https://speedhiveshop.mylaps.com/active-sports/prochip-flex.html>
